

LIKE CHOOSING THE EXTERMINATOR OF INSECTS MORE SUITABLE

At the time of choosing the more correct exterminator of insects for our home or commerce, we will realize a valuation with a few small questions, which it will be what determines our choice.

It is important know the square meters or surface of the stay, it is necessary to highlight that the exterminators of flying insects it has more coverage of action during the night, which for the day, as is indicated in the table. We will realize an approximate estimation of the square meters and will look in the table for the proportion, concentrating on the coverage in the daytime.

Also it is very important to recognize the insects that we need to eliminate, and if it is for our home or trade. Like the place we want where it to put, placed on the wall, suspended or on hid base. If we need it electrically or adhesively, since the regulations indicate that for trades of sale of nourishment needs adhesive swatters.

This table was helping us to the choice of the electrical exterminator of insects that more it should approach our needs.
